Una linea di shoppers adatte ad ogni scopo, per l'uso quotidiano, per i regali aziendali, per i negozi, per il tempo libero.

Dedicata ai materiali naturali, ecologici, riciclabili. Perché il mondo ha bisogno di nuova energia.

A shoppers line suitable for every purpose, for everyday use, corporate gifts, shops and leisure.

Made of natural materials, environment friendly, recyclable. The world needs a new energy.

PP NON WOVEN BAG

Tessuto Non Tessuto (TNT) è il termine generico per indicare un prodotto industriale simile a un tessuto ma ottenuto con procedimenti diversi dalla tessitura. Le principali caratteristiche sono: idrorepellenza, resistenza a temperature elevate, non abrasività al tatto. Nell'uso quotidiano trova applicazione in oggetti quali ad esempio sacchetti, borse piccole e grandi per la spesa, per contenere giornali, materiale vario. Può essere personalizzato con stampa serigrafica a più colori.

Nonwoven is the generic term for an industrial product like a fabric but obtained by different procedure than weaving. The main features are: water resistance, resistance to high temperatures, not abrasive to the touch. In daily use finds application in objects such as bags, small and big shopper, to contain newspapers or various material. The Nonwoven fabric can be customized with silk printing in various colors.

PP NON WOVEN + LAMINATION BAG

Il Tessuto Non Tessuto può essere personalizzato con stampe in quadricromia accoppiando alla base un film (foglio molto sottile ma resistente) che può essere lucido o opaco, che viene stampato in precedenza con macchine offset. L'applicazione di questo foglio rende più resistente la shopper che quindi sopporta pesi maggiori nel trasporto.

Nonwoven fabric can be customized with 4 color process print by joining it with a transparent film (very thin but strong), with matt or glossy finishing, previously printed with offset machines. The application of this sheet makes the shopper more resistant.

PP WOVEN + LAMINATION BAG

Prodotto ottenuto dalla tessitura, mediante fibre incrociate, che vengono unite per realizzare una shopper molto resistente, grazie anche al fatto che viene accoppiato un foglio, stampato in precedenza con macchine offset, che potrà avere finitura lucida o opaca.

Synthetic fabric obtained by weaving fibers, joined together to achieve a very resistant shopper, thanks also to the fact that the fabric is coupled with a film previously printed with offset machines, that can have shiny or gloss finishing.

POLYESTER BAG

Come la maggior parte delle fibre sintetiche, il Poliestere rispetto alle fibre naturali presenta importanti vantaggi: maggiore resistenza all'usura, non viene attaccato dalle tarme, è leggero, se bagnato si asciuga in fretta. Inoltre è molto resistente e facilmente stampabile.

The Polyester, as most of the synthetic fibers, has quite a lot of advantages if compared with natural ones: high resistance to wear, cannot be attacked by moths, lightweight, dries quickly when wet. It is also very durable and easy to be printed.
